

PREPARED

Repetition and reminders can help ingrain good security practices into employees' work routines, making them more likely to act appropriately when faced with a potential threat.

VIGILANT

Training is the last mile to any good compliance plan. You can build a plan and implement it to perfection, but if users are not vigilant in implementation, then the plan will ultimately fail.

INFORMED

Incorporating end user cyber awareness training as part of their everyday productivity training can be an effective way to ensure that employees are well-informed against new threats that emerge regularly.
